FISH APPROVED

#### Killer-Fish

The Brad's Killer-Fish Series are a diving plug with a tremendous salmon-agitating action combined with rattles for an irresistible offering.\* Killer-Fish are designed to run true out of the package with superior strength. They are engineered with a wide opening around the eye for easy tunability. Killer-Fish are equipped with USA made Duo-Lock Snaps, VMC Hooks, and premium paint finishes to meet the demands from the most avid fishermen. Brad's Killer-Fish can be fished by flatline or weighted trolling, plunking, or back trolling.

**Wrapping:** While Killer-Fish can be fished unwrapped, the most deadly effective method is to wrap your Killer-Fish with a bait fillet or chopped bait. Sardine, herring, anchovy, smelt, coon shrimp, or oil packed tuna are very effective options. Center your fillet or chopped bait around the belly eyelet of your Killer-Fish. If your wrap is not centered, it can change the action of your Killer-Fish. Secure your wrap with elastic thread or small rubber bands. (Video tutorials on www.BradsKillerFishingGear.com)

**Tuning:** If your Brad's Killer-Fish swims to one side, hold the lure facing you and **very slightly** turn the eyelet opposite the direction your Killer-Fish is swimming. Continue to adjust in small increments until corrected.

**Single Hook Option:** If local regulations only allow for a single hook point, use a Brad's Barrel Swivel and an open-eye single hook off the back.

\* Some colors available in Non-Rattle

Adding a second Brad's Split Ring above your treble hooks is a technique some anglers use to:

- 1. Allows greater rotation to the hooks
- 2. Gives fish less leverage when rolling
- 3. Spaces your hook back slightly farther

#### **Plunking Killer-Fish**

Plunking Killer-Fish is an extremely effective technique in waters that have enough current to dive the plug when you are holding stationary, whether anchored or fishing from shore. Rig your Killer-Fish with a sliding weight system and longer dropper line. A common length for Plunking Killer-Fish is 2' dropper with a 4' leader.

### Killer-Fish

#### **Tips for Success:**

- Change your wrap every 30-60 minutes. This ensures your scent & bait trail is fresh.
- Keep your Killer-Fish clean! Salmon can smell in the parts per billion, so wash them down with Lemon Joy Non-Ultra to remove any foreign scents.
- "Let 'em eat it!" A salmon striking a Killer-Fish plug is likely one of the most exciting takedowns you'll ever see, however, it is very important to let the rod pulse a few times before picking it up. Picking up your rod too soon can rip the Killer-Fish right out of the salmon's mouth. Patience pays off, and will lead to more solid hook-ups.

#### Killer-Fish Sizes

K	F14	KF15	KF16
	4"	4 - 3/4"	5 - 1/4"

**Back-Trolling:** Face your boat up stream and above the area you want to run your plugs through, and hold your boat in place as though you were anchored. Send your Killer-Fish out the back of your boat; once you stop feeding line your Killer-Fish will catch current, dive, and start to wiggle. Work your Killer-Fish through the hole by slowly sliding down river, making sure to move slower than the current to ensure your Killer-Fish is catching the current and working fully.

#### Flatline & Weighted Trolling: On

average, a Brad's Killer-Fish will dive approximately 8-12 feet when run without weights. Actual diving depths vary based on speed of current, line diameter, and length of line out. To increase diving depth, you can use a free-sliding or fixed weight or diver.
